COVERSE IT SUPPORT SERVICES

Building / Property Management IT Support Services

Building management companies whose responsibility is to provide critical maintenance and upkeep of commercial properties have historically relied on their clients and/or tenants to obtain their own IT services when needed.

COVERSE believes this is a crucial service and revenue generating source that has been overlooked and underestimated by property management companies for years. A recent U.S. survey of businesses ranging in size from five to one hundred employees showed that nine out of every ten businesses utilized computers and computer based technologies in their daily business activities.

In addition, many business today operate well beyond the normal 8AM to 5PM five days a week work arena which necessitates the need for IT services outside of what used to be considered normal business hours.

All of this when combined together demonstrates the need for building and property management companies to offer IT services to their clients as part of a standard suite of management services.

Clients benefit and see the advantages of this added service since many organizations struggle to afford a full time IT staff member.

The potential revenues for offering outsourced IT services on an "as needed, on call basis" could be significant.

We believe in simplifying IT!
