

Just don't react to network outages...

Prevent them before they happen

Eliminate the guess work and finger pointing

MANAGED NETWORK SERVICES

- * Network outages can easily cost thousands in lost business or customer support costs.
- * Reduce your risk of catastrophic network outages for one, low monthly fee.

Proactive Surveillance - of the major components of your network, tailored to meet your budget and your needs. COVERSE can monitor trends and provide analysis of real time information and then react proactively in most instances before your network goes down!

80% of all network outages occur due to failure of companies to proactively monitor their network resources!

What We Can Monitor:

- Disk storage usage / limitations
- MS Windows Server critical events
- Email usage and storage utilization
- Software updates and patches
- Router/Firewall/SPAM Filter
- Network security violations
- Network Server System up / down time
- Network traffic patterns and load analysis
- Network availability and performance
- Identify vulnerabilities of existing network
- Backup times, storage requirements, failure and success of initiated backups
- Network virus threats and vulnerabilities

Managed Network Services (Lite) is designed for businesses that can not afford full time IT staff.

\$ **99**
/ month

As low as \$99.00 per month per server depending on the size of your network and options selected.

- Call for option details -

An ounce of prevention, a pound of cure...

Network managers agree that most network outages can be prevented if given enough heads-up. Monitoring & Alert examines your network devices and provides automated alerts, allowing COVERSE to identify and isolate potential troubled areas of your infrastructure before they can cripple your business. Cost effective for small businesses!

COVERSE's Managed Network Services (Lite) is specifically designed to provide every client with a cost effective and affordable alternative to hiring a full or part time IT person to monitor their network resources. Many companies today can not afford the high price tag of employing an IT professional just to sit and monitor the condition of their network. Unfortunately 80% of all network outages, even partial outages could be avoided had someone taken proactive measures to resolve minor problems "before" they became major ones! However, to do so requires that someone with professional IT knowledge and experience is involved with this process. We believe we have the answer for this problem....**Managed Network Services (Lite)**

WHAT ARE THE BENEFITS

Identify and isolate potential issues before they become business impacting

COVERSE receives alerts automatically triggered via email or pager if performance thresholds are violated

Our engineers will take proactive counter measures to assist you during critical events
